

## **Editorial: Thanks from the Journal of Modern Medicinal Chemistry (JMMC) to Professor Dr. Hakan Eriksson and Professor Dr. Emmanuel Andrès**

The Journal of Modern Medicinal Chemistry (JMMC) is grateful to Professor Dr. Hakan Eriksson from the University of Malmö, Sweden, for his outstanding past commitment as editor in chief of JMMC. Under his era, JMMC became an international reputation allowing for the publication of many interesting reports from around the world with focus on a wide range of clinical and scientific issues.

The topics covered the synthesis of new chemical compounds and their use for treatment of various diseases, docking studies of natural and synthetic compounds, and natural products of clinical importance.

JMMC also appreciated the continuous past engagement of Professor Emmanuel Andrès from the University in Strasbourg, France, as co-editor of JMMC. During his tenure, he actively participated in the peer review process and played an important role helping increase the citation of JMMC among the scientific community.

The JMMC editorial committee did heavily benefit from the outstanding expertise of Professor Eriksson in biochemistry, cell biology, and immunology, and of Professor Andrès in internal medicine including haematology with focus on drug induced adverse reactions. It was a pleasure to work together with both of these excellent scientists.

JMMC is also pleased that Professor Rolf Teschke from the Klinikum Hanau, Academic Teaching hospital of the Goethe University in Frankfurt/Main, Germany, agreed to become the new editor in chief of JMMC. He is internist with the subspeciality in gastroenterology and hepatology with expertise in alcoholic liver disease, drug induced liver injury (DILI), herb induced liver injury (HILI), and causality assessment methods in DILI and HILI.
